

## ABSTRACT

1     An electrical connector including electrical contacts, a  
2     first housing member and a second housing member. The  
3     first housing member has contact receiving areas. The  
4     electrical contacts are located in the contact receiving  
5     areas. The second housing member is connected to the  
6     first housing member and comprises a mating electrical  
7     connector latch comprising a latch surface at a front end  
8     of the latch and a lever arm extending rearward from the  
9     front end of the latch. The lever arm is adapted to  
10    pivot on top of a portion of the second housing member.
